THE DESIGN BEHIND EXTEND

By PJ PRODUCTION

EXTEND is our new addition to the APTO Collection. It is inspired by the rough New Yorker style, consisting of raw brick walls and black coated steel. The core idea is to make place for the rustic and unpolished in a stylish and modern way.

Another inspiration for EXTEND is flexibility and multi-functional use, which is fundamental in APTO.

EXTEND is made by a set of very simple parts. The construction is made so it can be personalized in several ways. The vertical profile has tracks where shelves can slide freely and later fixed. This makes it possible to change the height of any shelf to one's exact preference. The fittings to attach shelves are made so when fixed, they press against an inner wall in the vertical profile, to secure a strong and precise grip.

EXTEND will be offered with several kinds of shelves to best suit your needs.

EXTEND is expected to be in stock in fall 2022.

CLAMP COLLECTION

"EXTEND" is a new member in the APTO Collection and will get its own collection between the others. Here will there in the future be expanded on the concept "Extend" and it will be taken to new levels of functionality and form. "EXTEND" is a frame that will be used for further exploration.

APTO is an innovative and inquisitive approach to design. the name is Portuguese and means change and adaptation. With its three and fourth coming interior collections, APTO strives to be resilient and adaptable. APTO transforms traditional production methods. That is why the design has been made as flexible and multifunctional as possible, in durable products that can be included in interior designs again and again.

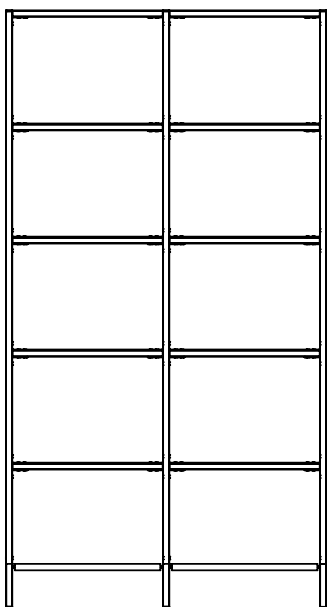

ACCUSTIC PANELS WHEN PRIVACY IS NEEDED

One of “EXTENDS” core features besides being a bookcase is to make small spaces in big environments. To help accommodate this feature we have made it so acoustic felt panels can be inserted in between the vertical profiles. The felt material is both flexible and stiff enough in itself, that it does not need fittings to hold it in place. It can easily be fitted in “EXTEND” without any tools needed.

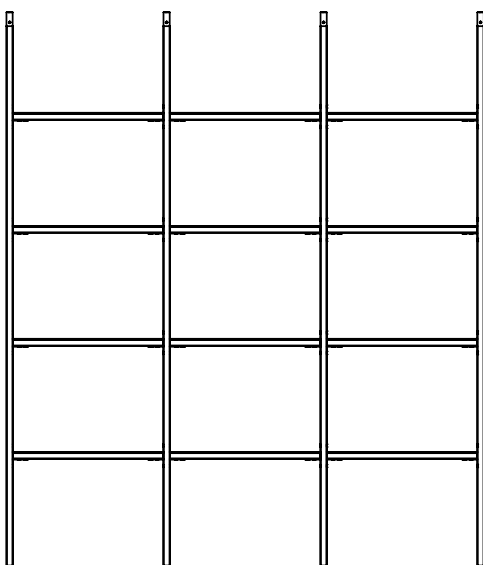

The felt material is of good quality, which secures high performance and a green profile. The felt is made of 70% previously recycled polyester fiber (from PET bottle flakes) to ensure a sustainable production.

The felt functions well in any environment due to its sound absorbing properties (Class B).
